

**ABSTRACT OF THE DISCLOSURE**

An image reading device capable of continuously reading images comprises a continuous reading controller switch and a control unit. The continuous reading controller switch receives continuous instructions and outputting a control signal to control the continuous reading and outputting operations of the image reading device. The control unit is used for controlling the image reading device and receiving the control signal to implement the continuous reading and outputting operations of the image reading device. While there are a lot of documents to be copied or scanned, the image reading device can reduce some repeating operations and increase the convenience.
